# Smarter Cleaning and Disinfecting!

## Protect people 24/7

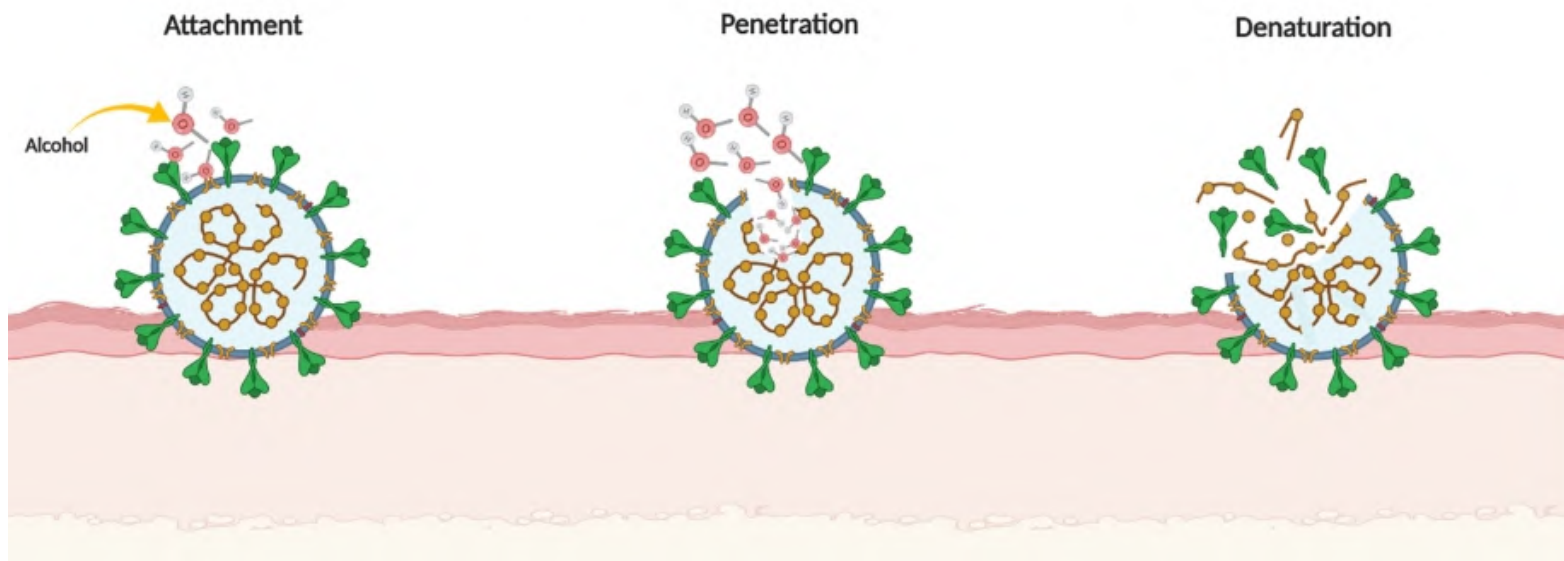

### Surface Protection Using Active Quant Technology

By only changing the cleaning products that you are using “Not changing procedures”

- Improve your occupational health & safety statement.
- Deliver on your duty of care.
- Increase your hygiene levels to what your staff or client deserve, **10X** on what your currently doing!.

### How Traditional Disinfectants V Quant Technology Kill Pathogens

The science behind the technology once explained make the understanding very easy!

#### Disinfectant alcohol based, require

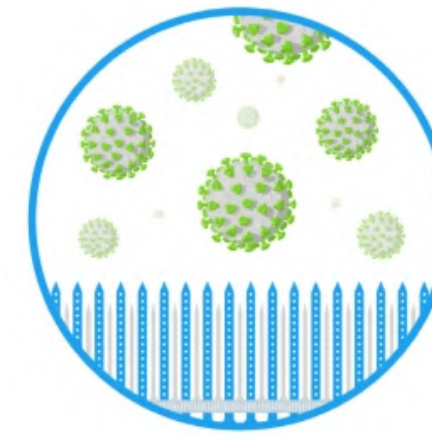

1. Topical application on top of the pathogen after its landed on a surface – “Attachment”
2. Alcohol breaks down the cell walls, “Penetration”
3. Interrupting the cell, leakage and killing the cell, Denaturation”

– Once disinfectant dries it stops working, surfaces are unprotected, allowing live pathogens to live, until the next disinfectant action!

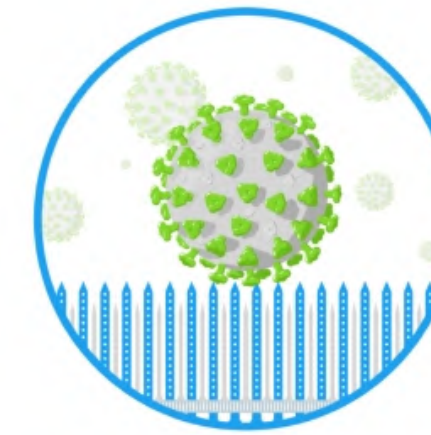

## Chapter 3

### Technology and Science

**Microguard**  
antimicrobial surface protection 24/7

Microscopic layer of spines  
long active bond

Attacks both gram-negative and  
gram-positive pathogens

Puncturing the cell membrane of the  
microbe destroying its structure  
completely

#### Microguard Quant based, requires

1. Topical application on to the surface,
2. when pathogen lands it pierces, puncturing the membrane destroying the cell,
3. actively protecting the surface, not allowing introduce pathogens to live on the surface waiting to be picked up by someone.

– **Actively working long after application, killing 24/7**

### **Training is important?**

This training ensures that you use these products safely, handling, storing and application.

Giving 3rd party training (from Microguard)

A PASS shows the person answered the questions and fully understands how to use the microguard range safely.

**It's a new world of higher hygiene practices and standards.**

### **Our Movement –**

**To get Australian businesses back to using sustainable, eco-friendly, active long-lasting products as an effective, ethical, long term hygiene solution.**

# Protected & Covered
